

rdf-config models

one per dataset, from
dbcls/rdf-config

HumanMine config

model, keys,
project.xml, priorities

SPARQL endpoints

RDF Portal: NCBI Gene, HGNC, GO, UniProt,
Reactome, ClinVar, PubMed, Ensembl
TogoVar: GWAS Catalog

1 Models

(every command)

InterMine model of
HumanMine's sources

rdf-config
subject tree

2 Map

translate

class and field per
subject, predicate
status + basis
tables, links
(SSSOM files)

3 Extract

translate fetch tsv

a query per table;
key required,
the rest OPTIONAL
paging / key batches
clean TSV

4 Load

items project check

Items XML
project.xml, keys,
additions, priorities
check

Curator

edits mapping files and rules;
stock converters are the reference;
a three-way merge keeps the edits

HumanMine (InterMine)

build and integrate; web
application, REST API, BlueGenes
